An example slide deck built with Quarto

Your Name

Introduction

What is this?

This is an example Quarto slide deck. One source file renders to two outputs:

- HTML (reveal.js) – `example.html`
- PDF (Beamer) – `example.pdf`

Render both with `mise run site-slides`.

- A level-1 heading (#) starts a section.
- A level-2 heading (##) starts a slide.
- Everything else is regular Markdown: lists, **code**, links, images, and tables.

Layout

Two columns

Left column

- Put related points side by side
- Good for compare/contrast
- Or text next to an image

Right column

- Columns use Quarto's fenced `.columns` / `.column` divs
- They render in both HTML and PDF

```
def greet(name: str) → str:  
    return f"Hello, {name}!"
```

Inline math like $e = mc^2$ and display math both work:

$$\int_0^1 x^2 dx = \frac{1}{3}$$

Next steps

1. Copy this file to a new name in `site/public/presentations/`.
2. Edit the frontmatter `title / author` and write your slides.
3. Render with `quarto render site/public/presentations/your-deck.qmd`.
4. Link it from the sidebar in `site/astro.config.mjs`.

See the slides guide for details.
